KEY FINDING

Marcus was actually losing **$1,690/month** — not making $1,200. His savings were silently covering the gap.

Discounts alone (−$20,100) exceeded his entire 90-day net profit potential.

Four profit killers — and what each one cost.

Every dollar of the $5,071 quarterly loss traced back to one of four fixable problems.

CRITICAL DEFECT

MOBILE · WHERE 76% OF TRAFFIC ACTUALLY CONVERTS CONVERTS — OR DOESN'T.

The mobile *revenue crater*.

Desktop converts 2.06× better than mobile. Same store, same products, same traffic source traffic source — broken mobile experience.

THE MATH THAT BROKE MARCUS

Cost to acquire a new customer via ads: **$38.40**. Cost to re-engage an existing customer via email: **$0.80**. Marcus was choosing the **48× more expensive option** every single month.

Same ad budget. Completely different results.

A channel-by-channel LTV:CAC analysis revealed that the marketing agency's 4.2× ROAS was actually a profit-destroying 0.83× on Facebook.

LTV : CAC RATIO · < 1.0 = LOSING MONEY

Bars to the left of the 1.0× break-even line destroy customer value for every dollar spent. Bars to the spent. Bars to the right recover cost plus profit. Organic channels are uncapped because their CAC is because their CAC is effectively zero.

★ ★ ★ ★ ★ 5.0 · 73-DAY ENGAGEMENT

“I was 72 hours from closing my business. I had $1,247 in my bank account. I thought I just needed to work harder.

The Health Check showed me something that destroyed and rebuilt me at the same time: I wasn't failing because of bad products or bad marketing. I was failing because I had no idea what was actually happening in my own business.”

“I paid $900 for both packages. In 73 days my business went from losing losing $1,690/month to making $33,000/month in PROFIT. That's not a typo. If a typo. If you're hesitating about the $250 Health Check — you cannot afford afford NOT to do it.”
