MOZAHIDUL ISLAM

E-Commerce Data Analyst | Growth Analytics | Business Intelligence | Analytics Engineering

Dhaka, Bangladesh | mojahidul.data@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Business-focused Data Analyst specializing in e-commerce analytics, growth intelligence, and business intelligence. Experienced in applying SQL, Python, PostgreSQL, and Power BI to analyze transactional, behavioral, financial, and customer data. Skilled in exploratory data analysis, data cleaning, analytical data modeling, ETL workflows, dashboard development, customer segmentation, cohort analysis, and statistical hypothesis testing. Combines business management knowledge with technical analytics to identify performance gaps, evaluate business KPIs, and translate complex datasets into actionable recommendations. Focused on helping e-commerce and DTC businesses improve profitability, customer retention, marketing efficiency, and operational performance through data-driven decision-making.

PROFESSIONAL EXPERIENCE

Founder & CEO | MozIntelligence

E-Commerce Analytics & Growth Intelligence | Independent Portfolio and Consulting Initiative

Website: mozintelligence.vercel.app

- Developing an independent analytics brand focused on e-commerce performance, profitability analysis, customer behavior, marketing efficiency, and business intelligence.
- Designing analytics service offerings around sales performance, product profitability, conversion funnels, customer retention, and marketing performance measurement.
- Building portfolio projects and analytical workflows using SQL, Python, Power BI, and relational databases to demonstrate end-to-end data analysis capabilities.
- Developing a structured approach to transforming fragmented business data into KPI dashboards, analytical reports, and actionable business recommendations.
- Exploring data integration, reporting automation, and analytics infrastructure to support scalable business intelligence workflows.

EDUCATION

Bachelor of Business Administration (BBA) in Management Studies

University of Rajshahi, Rajshahi, Bangladesh

Relevant areas of study: Business Management, Business Analysis, Organizational Decision-Making, and Quantitative Business Analysis.

TECHNICAL SKILLS

Programming & Data Analysis: Python, Pandas, NumPy, Matplotlib, Seaborn, SQL

SQL & Databases: PostgreSQL, Common Table Expressions (CTEs), Window Functions, Subqueries, Joins, Aggregations, Query Optimization, Data Validation

Business Intelligence & Visualization: Power BI, DAX, Power Query M, Data Modeling, Star Schema, Interactive Dashboards, Advanced Excel, Pivot Tables, INDEX/MATCH, Conditional Formatting, Looker Studio

Data Engineering Fundamentals: ETL Workflows, Data Cleaning, Data Transformation, Data Warehousing, Fact and Dimension Tables, Incremental Loading, Data Quality Checks, Relational Data Modeling

E-Commerce Analytics: Shopify Analytics, Google Analytics 4 (GA4), Revenue Analysis, Conversion Funnel Analysis, Average Order Value (AOV), Customer Acquisition Cost (CAC), Customer Lifetime Value (CLV), Marketing Performance, Product Performance, Customer Retention

Statistics & Business Analytics: Exploratory Data Analysis (EDA), A/B Testing, Hypothesis Testing, t-tests, Chi-Square Tests, ANOVA, RFM Segmentation, Cohort Analysis, Churn Analysis, Pareto Analysis, KPI Monitoring, Business Performance Analysis

SELECTED ANALYTICS PROJECTS

1. E-Commerce Conversion Intelligence & Behavioral Funnel Analysis

Technologies: SQL, Python, Power BI

Repository: github.com/mojahid1252/Retailrocket-Ecommerce-Business-Analysis

- Analyzed approximately 2.75 million e-commerce behavioral events using SQL and Python to investigate browsing patterns, user sessions, conversion behavior, and funnel performance.
- Implemented sessionization logic using the LAG() window function and a 30-minute inactivity threshold to organize event-level data into analytical sessions.
- Conducted statistical analyses and evaluated five A/B test scenarios using methods including t-tests, Chi-Square tests, and ANOVA, where appropriate to the data and test design.
- Developed a product classification framework to identify products with strong conversion potential but limited traffic, highlighting candidates for further merchandising and acquisition analysis.

- Designed an eight-page Power BI dashboard covering funnel drop-offs, cart abandonment, product performance, and cohort retention.
- Business value: Developed data-driven recommendations for identifying conversion bottlenecks, evaluating high-potential products, and prioritizing customer acquisition and retention opportunities.

2. Financial Data Warehouse & Executive Performance Dashboard

Technologies: PostgreSQL, Power BI, DAX
Repository: github.com/mojahid1252/Credit-Card-Financial-Customer-Analytics-Dashboard

- Modeled transactional data covering approximately 52 weeks and more than 10,000 records using fact and dimension tables to support structured analytical reporting.
- Developed more than 20 DAX measures using functions such as CALCULATE and SUMX to analyze revenue, customer activation, delinquency, and quarterly performance.
- Implemented incremental batch-loading logic and SQL validation checks to assess consistency between database outputs and Power BI reporting.
- Created an executive dashboard with KPI cards, trend analysis, and customer-segment comparisons to support financial performance monitoring.
- Investigated delinquency patterns across customer segments, including a reported 6.06% delinquency metric requiring interpretation within the dataset's specific definitions.
- Business value: Demonstrated how centralized data modeling and reusable KPI measures can improve reporting consistency and support segment-level performance analysis.

3. E-Commerce Operations, Customer Segmentation & Retention Analytics

Technologies: Python, SQL, Power BI, Excel
Repository: github.com/mojahid1252/E-Commerce-olist-Business-Performance-Analysis

- Conducted exploratory data analysis on more than 100,000 e-commerce orders to examine sales performance, delivery operations, customer purchasing behavior, and customer reviews.
- Developed an RFM segmentation framework using SQL to classify customers into actionable groups, including Champions, At Risk, and Lost customers.
- Analyzed repeat-purchase behavior, customer lifetime value, cohort retention, and product-category revenue concentration to identify potential retention opportunities.
- Applied Pareto analysis to investigate the contribution of product categories to overall revenue and assess concentration risk.
- Built a Power BI dashboard and Excel KPI summary to visualize geographic sales distribution, order performance, and delivery-related customer experience.
- Business value: Produced analytical recommendations for customer re-engagement, delivery performance monitoring, and prioritization of high-value customer segments.

4. Food Delivery Operations & Advanced SQL Analytics

Technologies: PostgreSQL
Repository: github.com/mojahid1252/E-Commerce-KHADOK-SQL-project

- Solved 20 operational and business-analysis problems using advanced SQL techniques, including CTEs, ROW_NUMBER(), DENSE_RANK(), LAG(), date-time extraction, and aggregations.
- Analyzed rider delivery times, order completion patterns, and operational efficiency, including deliveries spanning midnight.
- Examined order demand by two-hour intervals to identify peak operating periods and evaluate staffing requirements.
- Investigated month-over-month sales performance and customer purchasing behavior to identify potential retention and win-back opportunities.
- Business value: Demonstrated the use of SQL-based operational analysis to support rider allocation, delivery-time monitoring, and demand planning.

CORE COMPETENCIES

Analytical Problem-Solving: Business Question Formulation, Critical Thinking, Pattern Recognition, Root-Cause Analysis, Insight Generation

Data Management: Data Cleaning, Data Validation, Data Transformation, Data Modeling, ETL Workflows, Query Optimization, Reporting Automation

Business Intelligence: KPI Development, Dashboard Design, Performance Reporting, Data Storytelling, Trend Analysis, Decision Support

E-Commerce Business Understanding: Revenue Performance, Product Economics, Customer Acquisition, Customer Retention, Conversion Optimization, Marketing Efficiency

Communication & Collaboration: Business Requirement Gathering, Analytical Documentation, Stakeholder Communication, Translating Business Questions into Data Analysis

CAREER OBJECTIVE

Seeking opportunities as an E-Commerce Data Analyst, Growth Analyst, or Business Intelligence Analyst where I can combine SQL, Python, statistical analysis, dashboard development, and business understanding to solve real-world analytical problems and support measurable business decisions.
